

After years of working in the shipping industry and building maintenance, I decided to set up my own company in 2023.

My versatile work experience makes me truly all-round. I have experience with diesel motor repair, overhaul and maintenance, for example generators, marine engines and offshore hydraulic/ electric diesel units. I also have experience with garden renovations, house installations, renovations, electrical and plumbing work.

I have a small arsenal of specified equipment to, for example, align engines with a laser alignment system.

**JML Services**  
Constructie – Installatie – Inspectie – Onderhoud – Reparatie

## CONSTRUCTION & INSTALLATION

Whether you need a small job or a major renovation, we can provide you with efficient, professional services to complete any project, including all necessary electrical, plumbing, installation and certification.

## INSPECTION

Engine alignments can be performed using the Fixture laser to ensure the engine is aligned with its corresponding counterparts, ensuring longer life for your engine.

## MAINTENANCE & REPAIRS

Anything with an engine can be maintained or repaired. With more than 20 years of experience in this field, especially in the maritime industry, all types of engines can be maintained to extend their lifespan. Repair work on small to large engines can be carried out in the workshop or on location.

### Fixturlaser NXA Pro

The Fixturlaser NXA Pro is the most user-friendly shaft alignment system on the market.

- Horizontal axis alignment
- Vertical axis alignment
- Cardan shaft alignment
- Machine train alignment
- Align belt pulleys
- Softfoot measurement
- Compensation for thermal growth
- Vibration measurement
- Full reporting included
